

Buddipole counterpoise wire assembly.

£32.95

DESCRIPTION

These wire assemblies are used for multiple purposes, including use as a wire counterpoise for our vertical antennas, as well as wire off the ends of our coils for the NVIS setups (see manual under "documentation" on the left navigation bar). The line winders that we use are custom-made out of black nylon with a fibreglass fill. These are very strong and lightweight. Each wire assembly comes with 32' of insulated wire. At the end of the wire is a ring terminal. Also included is our new "counterpoise wire adapter", or "CWA", which connects to the side of the Versatee or the end of the standard coil when using the NVIS setups. The CWA allows for easy tool-free removal in the field. We also have a longer version of wire assembly which is used for our "Low Band Vertical" setups. The total length is 66'. See the drop-down box below for ordering.
