 Excellent Performance at Low Heights

## Radio Works CW-80 Carolina Windom 80 wire.

### £179.95

## DESCRIPTION

The CW-80 RadioWorks Carolina Windom 80, The size of this antenna makes it ideal for many gardens and its DX potential will add at least an S-point to your signal on most occasions. The secret is in the vertical section which offers excellent low angle radiation. But short-haul contacts will be boosted. As the antenna covers all bands it can be used as the main system and it works equally well as inverted V or sloper. The offset feed system makes the domestic installation that much more convenient.
