Buddipole Rotating Arm Kit

£44.95

DESCRIPTION

The Buddipole Rotating Arm Kit, Our rotating arms allow the operator to change configurations of the Buddipole very quickly. It's a kit for experimenters...for those of you who want to see, for example, if an L-shape or sloper is better than a classic dipole for DX'ing. If you own an antenna analyzer, this kit is for you!

The Rotating Arm Kit includes 2 "soft touch" rubberized clamping knobs, 2 machined 6061 aluminum rotating arms with stainless steel pins (for use with the VersaTee), and instructions for adjustment.

Note: These rotating arms can also be used with the older style center Tee by utilizing the other side without the pins.
