LINEAR AMP SPC Supertuner £509.95

DESCRIPTION

The SPC Supertuner is designed to handle high power either feeding coax or balanced line. The ATU has wide-spaced capacitors, silver-plated main inductor and large ceramic switch.

All these are heavy-duty components to handle powers up to 1500W.

The SPC Supertuner has an instant bypass mode that can be used with coax or a balanced feed with the balun left in circuit.

The balanced line is fed from a large double toroidal type transformer which is insulated with special fibre glass sleeving to reduce any chance of flash-over between windings.

The large VSWR/ Power meter reads 150W full scale on low and 1500W on the high position.

A 12V DC supply is required for the operation of the relays and also to illuminate the meter.

10 - 160m

3 outputs - coax 1, coax 2, balanced feed

Max input power 1500W

VSWR/Power meter 150W/1.5kW

Wide spaced capacitors

Jackson slow-motion drives

Silver plated inductor

High power ceramic switch

Large double toroidal balun-type transformer

Size 325 x 350 x 165mm

Weight 4.2 kg
