Nevada WH3080-SOLAR Wireless Weather Station **£99.95**

DESCRIPTION

This WH3080-SOLAR Wireless Weather Station includes a solar power transmitter instead of the standard battery powered transmitter.

The wireless transmitter uses solar energy to recharge it's internal AA size rechargeable batteries. This product will power all the sensors connected to it and transmit the data to the main unit. It also allows the LCD monitor to display UV Index & Light Transmitted (LUX).

The WH3080-SOLAR is a wireless weather station that requires no connecting cable between the LCD monitor and the remote weather sensors. The range depends upon local obstructions but the normal 150m range will satisfy most requirements. This weather station offers amazing value and comes with everything you need to set it up in the garden. All hardware is included and the only items you need to supply are a short mast to attach the supplied stub mast and sensor assembly.

The LCD display is button operated and allows comprehensive adjustment and correction for your location. It can also display historic data, and within the menu you can select imperial or metric values.

Also included is a software program that allows you to link your LCD panel to your PC via the included USB lead. From here you can not only program the LCD panel, but you can also

download stored data and then display it in data base format for keeping your own weather history. And if you are in an area or situation where weather plays a critical part, then you can switch on an alarm that can be triggered by any of the data sensors.

- WH3080-SOLAR New Style display panel with LCD Screen
