Buddistick Tripod

£31.96

DESCRIPTION

This lightweight tripod collapses to only 7" and fits nicely into our Buddistick Portfolio bag. The adjustable head is particularly handy when setting up the Buddistick (or any small vertical antenna) on uneven or steep terrain. The legs can be secured into the ground at any angle and the head can be aligned manually so that the antenna is perfectly vertical. The velcro strap can be used to secure the tripod to many fixed objects (fence posts, railing, even tree branches!).

Note: A mounting kit is required for use with the Buddistick antenna. Our custom mounting kit is available as an accessory on the drop-down list and includes a SO-239 adapter for a bottom coax feed. The top part of the mount has standard 1/4 x 20 threads and is locked down with a "soft touch" rubberized clamping knob. Includes one 31' radial wire for use as a counterpoise.
