Diameter uppermost tube 82.36 mm

Length of tripod beam (Radius)

ca. 152 ca. 152 cm

Order No. 38300-38310

Fast raising and lowering, comfortable Masts for antennas and other payloads (e.g. Floodlights, Cameras, Anemometer, Microphones etc.).

These masts are made of concentric sections of anodized aluminium, equipped with a lock against rotation. The top section is terminated with a large flange which allows installation of various payloads. The functional principle is the reverse of an air pump for your bicycle: if you put pressurised air into the nozzle of the pump, the handle extends due to the internal
