Tigertronics Signalink Plug and Play Jumper Modules

£9.95

DESCRIPTION

Our "Plug & Play" jumper modules plug into the Signalink in place of the jumper wires that you would normally use to configure the unit for your radio. This greatly simplifies installation and completely eliminates the possibility of installing the jumper wires incorrectly. Swapping radios is also easier, as you simply unplug one module and plug in another as needed when you change radio cables. All jumper modules are compatible with the Signalink USB, and most will also work with the older Signalink and SL-1+. Modules are currently available for the most popular radio configurations, and new modules for other configurations will be added soon.

Please check "SPECIFICATION" for compatibility!
