**Sirio MD118-137 Aviation  
Antenna 118-137MHZ  
£49.99**

## DESCRIPTION

The Sirio MD118-137 Aviation Antenna 118-137MHZ, Dipole 1/2 with loaded radial covering the frequency range of 118-137 MHz for aeronautical band. The whip is made of black chromed stainless steel and all the metallic components are of brass or steel to get the best robustness.

Thanks to its loaded radial MD 118-137 Aviation doesn't need any metallic ground plane and it is particularly recommended for installation on small aircraft.

Suitable for aeronautical service, omnidirectional mono-band, unity-gain recommended for installation on small aircraft flexible stainless steel radial

Type: dipole 1/2 with loaded radial frequency range: 118-137 MHz for aeronautical band impedance: 50 radiation (h-plane): 360° omnidirectional

Polarization: linear vertical gain: 0 dbd - 2.15 dbi max. Power (cw) at 30°C: 50 watts cable length

Materials: Stainless Steel 17/7 PH, Nylon, Chromed Brass, Zamac Wind resistance: 220 Km/h
