ACOM Compact MF/HF Antenna System

£1514.95

DESCRIPTION

ACOM Compact MF/HF Antenna System, The V101 - 03AT antenna system consists of the Broadband Inverted Vee Dipole Antenna V101. It is designed for receiving and transmitting in the MF/HF frequency range of 1.6 to 16 MHz. Although the main advantage of this antenna is enhanced at the short and medium range to 500-1000 km (no skipping any shorter distance thanks to intensive sky wave radiation), it is still fit at longer-range circuits in excess of 2000 km.

The antenna set up requires the automatic antenna tuner model 03AT that is mounted at the antenna base and uses remote control. The V101 - system can handle up to 1.6 kW at frequencies above 3.5 MHz but for lower frequencies the power handled decreases gradually to 200 W on 1.6 MHz.
