FlexRadio FLEX-6400 / FLEX-6400M
£2099.95

DESCRIPTION

FLEX-6400M

The FLEX-6400M model offers all of the above mentioned features and is additionally equipped with a front panel. This makes the migration to SDR technology particularly easy, as the transceiver feels like a classic shortwave radio, but uses the latest digital technology internally.

The control panel is equipped with a brillant touch screen with 1920x1200 pixels resolution. A wide range of functions can be accessed via this screen, such as frequency setting or selecting the operating mode. The traditional controls are intentionally placed at large distances on the front panel for easy and clear operation even in hectic contest situations. The fact that almost all of these buttons have only one function contributes to the very clear and easy to learn operation of Flexradio transceivers.

Remote Operations

Every FlexRadio model - with or without front panel - can be easily remote controlled. The following options are available:

SmartSDR Software on Windows-PC

SmartSDR for IOS on iPhone or iPad

Maestro Console

This remote control can be done via the local network in a building, but also via the Internet from a great distance. No matter where you are - you can still work that rare DX station from your own station when you are sitting in the hotel! With the latest version V3 of the SmartSDR software it is even possible to operate a transceiver with two remote operators at the same time. Any mix of the above mentioned devices can be used - a PC, iPhone/iPad or the Maestro console.
