

2-inch mast coupler to join two antenna masts together.

£17.99

DESCRIPTION

The 2" masts jointing sleeve is designed for use with 5.08cm (2in) masts, providing a galvanized finish for durability. This 38.1cm (15in) long sleeve allows for the joining of two masts to create a taller structure, effectively doubling the height. By combining two 10' masts using this jointing sleeve, users can achieve the height equivalent of a single 20' mast, offering versatility in mast configurations. Constructed to accommodate 5.08cm (2in) masts exclusively, this jointing sleeve ensures a secure and stable connection between the masts. The galvanized coating adds a layer of protection against corrosion and ensures longevity in various weather conditions. Its 15-inch length provides ample overlap between the masts, enhancing the structural integrity of the combined setup for reliable performance. Ideal for applications requiring increased mast height, the 2" mast jointing sleeve offers a practical solution for achieving greater elevation. Whether used in telecommunications, construction, or other industries, this device simplifies the process of combining masts to meet specific height requirements efficiently and effectively.
