## **Palstar at-4k 2500 watt manual antenna tuner. £1,365.00**

## **DESCRIPTION**

The Palstar AT-4K 2500 Watt Manual Antenna Tuner is a high-quality and durable tuner that covers 160 to 10 Meters with a power rating of up to 2500 watts PEP. It features an Active Peak and Peak Hold Wattmeter, a front panel controlled relay switching between balanced line and coax output, and a 6-position antenna selector switch. The AT4K offers forward power metering in two ranges, 300 and 3000 watts. It solves the problem of exposing the balun to a wide range of impedances and reactances by utilizing a 1:1 unbalanced-to-balanced transformer in the INPUT of the network. The AT4K is made with 11 Ga. (.090" thick) iridite-treated aluminium metalwork and has a durable powder-coated finish on the front panel and top cover.
